

Album Streaming

Albums cannot be streamed. When someone talks about "streaming an album" he or she is, in effect, talking about creating a play list of all the tracks of the album and then streaming each track in turn.

Consequently, it is not permissible to create a streaming Deal and link it to a Release containing more than one primary resource and DSPs receiving such Deals are advised to ignore them. Should a Release creator wish to allow streaming of all resources, a suitable Deal needs to be provided for each of the `TrackReleases` communicated in the `NewReleaseMessage`.
