

Resource Groups and Track Releases

Track Releases need to be communicated in each `NewReleaseMessage`.

In ERN-3 all Releases – whether album Releases or whether Track Releases – are described in the same way. And this means that while a `TrackRelease` can only contain one primary Resource, it still needs to contain a `ResourceGroup`.

In ERN-4, however, main/album Releases are described in the `Release` composite while Track Releases are described in the – very much simplified – `TrackRelease` composite.
